

July 21-23, 2006 PREM Retreat

# **New Photosensitizers based on Nanomaterials**

Lixin Shi and Matthias Selke\*

Cal State L.A.

# QDs-Photosensitizers Nanocomposites: Bifunctional with high Singlet Oxygen Generation and Fluorescence Lable

**\$1.60 ~ 1000 mL  $1 \times 10^{-4}$  M**

Animal experiment is doing with UCLA

Excitation at 355 nm

Quantum Yields of Singlet Oxygen 0.43

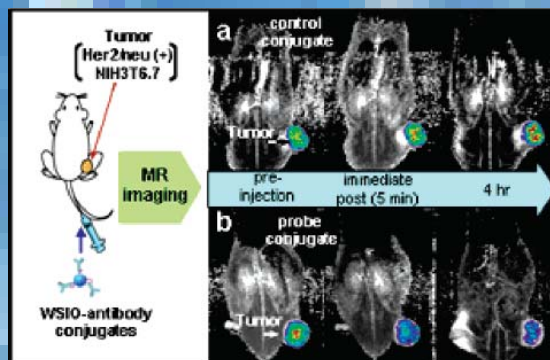

Selke, M. et al. *JACS*, **2006**, 128,6278.

“Nanoparticles Open New Avenues for Photodynamic Therapy”

--- NCI Nanotech News, June 5, 2006

Cell experiment is undergoing with USC

# Water soluble Fe<sub>3</sub>O<sub>4</sub>-Organic Dye Nanocomposite: Towards Magnetic Resonance Imaging and Photodynamic Therapy

Cheon, *et al. JACS*, 2005, 127, 12387

QY of singlet oxygen of composite: 0.25  
Free TSP as reference

future work: 1. Measure magnetic properties (SQUID)  
2. Animal experiments

# Single-Walled Carbon Nanotube --- Methylene Blue Nanocomposite: From Nanostructure to Photodynamic therapy

Incubated with HL60 cell  
Irradiated at 400 nm

“Positive Therapy”
